

# The Cure for IT Alert Overload

Faster Detection. Faster Triage. Better Collaboration.

Systems monitoring, APM, web and user monitoring, error detection, log management – today's monitoring stack is complex, fragmented and noisy. With multiple tools creating a flood of disparate alerts, IT teams struggle to identify and resolve incidents in a timely manner, resulting in poor uptime and angry customers. BigPanda automatically consolidates and correlates IT alerts from all of your various monitoring systems into unified, high-level incidents, so you can instantly detect critical issues and start taking action.

**The results? Faster time to detection. Fewer incidents. Less downtime. Happier customers.**

## Improve time to detection, triage, and remediation.

### ■ Reduce Alert Noise

Intelligently correlate IT alerts into high-level incidents, so you can reduce noise & spot critical issues faster.

### ■ Centralize IT Visibility

Centralize IT visibility across all your fragmented clouds, teams and monitoring tools.

### ■ Custom Views for Any App or Team

Combine alerts from multiple monitoring tools into Custom Views for any app, team, microservice or cloud.

### ■ Gain Insight Faster

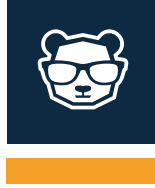

Enrich incidents with info you need to triage issues: metrics, runbooks, code deploys, similar historical incidents, & more.

### ■ Smart Ticketing and On-Call

Streamline your ticketing, chat & on-call tools. Keep tickets updated & in sync with your dynamic IT infrastructure.

### ■ Reporting and Analytics

Discover insights that are buried inside of your noisy alerts. Learn about your top problematic apps, services and machines.

## Correlate All Your Alerts, Deployments & Communications

See the full list of supported apps at [bigpanda.io/integrations](https://bigpanda.io/integrations)

## Benefits of BigPanda

### Improved Detection

Cut through noise & spot issues faster

- Reduce alert clutter by up to 99%
- Streamline ticketing, chat & on-call
- Improve focus on critical issues

### Faster Remediation

Quickly gain the context you need to take action

- Improve MTTR by up to 86%
- Enrich alerts with info you need for fast triage
- Learn from similar historical incidents

### Better Resource Utilization

Enable your teams to do more with less

- Automate manual detection & triage
- Address only tickets that matter
- Scale through automation, not headcount

### Happier Customers

Ensure great user experience for your customers

- Minimize downtime & MTTR
- Maximize service quality & availability
- Keep customers happy
